

McCracken Eye and Face

Monthly Newsletter

May promotion

May promotion: the addition of PRP to your microneedling appointment enhances recovery and utilizes your body's own growth factors to aid in the regenerative process. It is also a safe and effective enhancement to your regular microneedling treatments. We are offering 20% off your microneedling appointment when you book with PRP for the month of May!

Staff Spotlight

Tyra, our Medical Assistant, has completed her associate degree in general studies and is pursuing a Bachelor of Science in Health Administration and Management with a concentration in Data Analytics. Tyra has over two years of experience in Optometry as an Optician and an Optometric Technician. She also has two years of experience in Dermatology as a Medical Assistant and Scribe.

Tyra's genuine passion for caring for her patients is clearly demonstrated in every task she oversees in and out of the procedure room.

In her free time, Tyra loves creating art in a few different media, whether it is pencil, oil pastels, acrylic or even makeup. She also enjoys playing flute, cello, and piano and exploring other instruments when she has the time.

Surgical Browlift

Ideal atomic positioning of the brow is right on the bone known as the orbital rim. As we age, the brow tissue may descend below this position and can affect the appearance of the eyes and overall face. This alongside excess upper lid skin can create a heaviness around the eyes and can even impact vision for some. In some cases, a surgical brow lift may be indicated alongside treatment of the upper and lower eyelids to optimize overall results.
